1.1 Overall conclusion on the level of compliance achieved

In the year 2021, the number of controls in the food sector fluctuated around the same levels as in 2020. Planning and priorities of the official controls, took into account the difficulties of the extended pandemic specific condition resulting in the development of a realistic control program utilizing risk analysis. In addition, care was taken to prevent fraudulent practices and fraud. It is pointed out, however, the significant reduction of human resources of the Competent Authorities at regional-local level over time and the difficulty of their response to the multiple responsibilities with which they are responsible. Nevertheless, the effort has been intensified for their more rational management with proportional coverage of companies in all stages of production, processing and distribution of food. The compliance rate of food business companies improved compared to previous years, with a total compliance of 97.7%. The infringements mainly concern general hygiene issues related to deviations in the operating procedures and issues of application of self-control systems. Also, the percentage of non-compliances in relation to the volume of import cargo remains low. Laboratory testing of biological and chemical risk factors as well as quality parameters, showed non-compliance rates slightly raised compared to previous years, with a total non-compliance of 4,1%.
